

Composition : Each ml contains: Chloramphenicol BP 5.00mg.

Indications Eye : Chloramphenicol is a broad spectrum bacteriostatic antibiotic. It is active against a wide variety of gram-negative & gram-positive organisms as well as rickettsiae and spirochaetes. It is indicated for use as topical antibacterial in the treatment of superficial ocular infections caused by sensitive organisms.

Ear : External ear canal infections.

Dosage & administration : Eye : For adults (including the elderly):

One to two drops applied to each affected eye upto six times daily or more frequently if required. (Severe infections may require one to two drops every fifteen to twenty minutes initially, reducing the frequency of instillation gradually as the infection is controlled).

Ear : 2-3 drops into the ear canal three to four times a day. Or, as directed by the registered physician.

Contraindication : Ophacol is not intended as a long-term treatment for dry eye syndromes. It is contraindicated in hyper-sensitivity to chloramphenicol or to any of the formulation.

Precautions : In severe infections topical use of Ophacol should be supplemented with appropriate

OPHACOL
